

FDS-3G-KS

Požární klapka čtyřhranná s čtyřhranným instalačním kitem

Popis

Požární čtyřhranná klapka s čtyřhranným instalačním kitem FDS-KS je dodávaná do rozměru 800x600 mm. Klapka představuje pasivní prvek požární ochrany. Své uplatnění nalezne tam, kde je nutné oddělit požární úseky od sebe a zabránit tak šíření toxicických plynů, průniku kouře a plamenů. Klapky jsou certifikovány dle normy ČSN EN 15 560, testovány dle ČSN EN 1366-2 a klasifikovány na EIS dle normy 13501-3+A1. Požární klapka je společně se způsobem její instalace neoddělitelnou součástí hodnocení požární odolnosti. Podrobnější informace o možných způsobech instalace jsou popsány v Návodu na montáž, obsluhu a údržbu.

Požární klapku je možné instalovat pouze v souladu s návodem na montáž a certifikovanými způsoby instalace!

Klapky vybavené mechanismem ručním se uzavírají na základě roztavení tavné pojistky a aktivace zpětné pružiny. Klapky vybavené servopohonem se uzavírají na základě signálu ze systému řízení budovy (BMS) nebo po překročení teploty termoelektrického teplotního čidla. Napájecí odvod servopohonu se přeruší a pružina uvnitř mechanicky uzavře list klapky. Aktivační mechanismy jsou odnímatelné a mohou se vzájemně nahradit či zaměnit, např. ruční mechanismus klapky lze nahradit mechanismem se servopohonem a podobně.

Instalační kit na požární klapce je nedílnou součástí klapky! Nelze ke klapce čtyřhranné dodat dodatečně. Instalační kit s označením KS je určený do čtyřhranného stavebního otvoru.

Aktivační mechanismus manuální

Standardně jsou všechna vyhotovení požárních klapek dodávána s ručním ovládáním, volitelně s koncovými spínači nebo elektromagnetem. Kontrola funkčnosti klapky se provádí ručním spuštěním mechanismu. V případě požáru se list klapka uzavírá automaticky. Klapka se podle provedení uzavírá mechanicky, buď po roztavení tepelné pojistky, nebo vzdáleným elektrickým impulsem (v případě vyhotovení s elektromagnetem v impulsním zapojení). Po uzavření je list mechanicky zajištěn v zavřené poloze a lze jej otevřít pouze ručně. Mechanismus klapku uzavře, když teplota v místě pojistky dosáhne, nebo překročí 74 °C. Zavření listu klapky nastane do 10 sekund po roztavení pojistky a uvolnění předepojaté mechanické pružiny..

Aktivační mechanismy se servopohonem

Standardně jsou klapky vybavené servopohonem s koncovými spínači, volitelně s napájecí a komunikační jednotkou. Servopohon uzavírá klapku, na povol od systému řízení budovy (přerušení napájení) nebo na základě porušení termoelektrického spouštěcího čidla. Servopohonem ovládané požární klapky jsou standardně vybavené termoelektrickým spouštěcím čidlem, který aktivuje uzavření klapky po dosažení nebo překročení okolní teploty 72 °C. Napájecí obvod servopohonu se přeruší a předepojatá pružina uvnitř servopohonu mechanicky uzavře do 20 sekund list klapky. Termoelektrické spouštěcí čidlo s aktivační teplotou 95 °C nebo 120 °C je na vyžádání.

Konstrukční provedení

Požární klapky mají plášť vyrobený z pozinkovaného plechu. List klapky je z neazbestovaného izolačního materiálu (vápenato-křemičitých desek). List po svém obvodu obsahuje pryžové těsnění pro zajištění těsnosti na studený kouř a intumexové těsnění, které se aktivuje při požáru na základě teploty.

Materiálové provedení

Výrobek obsahuje pozinkovaný ocelový plech, vápenato-křemičité díly, ohnivzdorný uhlíkový sklolaminát, polyuretanovou pěnu a etylen-propylenovou pryž. Tyto jsou zpracované v souladu s místními předpisy. Výrobek neobsahuje žádné nebezpečné látky, s výjimkou spojky v termopojetce, která obsahuje miligramové množství olova.

Příslušenství

Detailní informace o příslušenství pro FDS-3G...-KS jsou dostupné v programu Systemair DESIGN pod Příslušenství k požárním klapkám.

AM-FD Aktivační mechanismus

- CE certifikace dle EN 15 560
- Testováno dle EN 1366-2
- Klasifikace dle EN 13501-3+A1
- Zaměnitelný aktivační mechanismus
- Rychlá a snadná instalace pomocí instalačního kitu
- Požární odolnost až do EI120S
- Manuální aktivační mechanismus s třídou krytí IP 44

Typy aktivace

Aktivační mechanismus manuální

- H0;** Základní provedení klapky, manuální aktivační mechanismus se zpětnou pružinou a tavnou tepelnou pojistikou s aktivací při 74° C (na vyžádání 100° C). Mechanismus je opatřen ochranným krytem IP 44.
- H2;** Manuální aktivační mechanismus H0 + indikace otevřená a uzavřené polohy dvěma koncovými spínači na 230V AC nebo 24V AC/DC. Mechanismus je opatřen ochranným krytem IP 44.
- H5-2;** Manuální aktivační mechanismus H0 + aktivační mechanismus s elektromagnetem 24V AC/DC v impulsním zapojení (aktivace zavření listu klapky nastane impulsem po přivedení napětí do elektromagnetu) + indikace zavřené a otevřené polohy klapky dvěma koncovými spínači na 230V AC nebo 24V AC/DC. Mechanismus je opatřen ochranným krytem IP 44.
- H6-2;** Manuální aktivační mechanismus H0 + aktivační mechanismus s elektromagnetem 230V AC v impulsním zapojení (aktivace zavření listu klapky nastane impulsem po přivedení napětí do elektromagnetu) + indikace zavřené a otevřené polohy klapky dvěma koncovými spínači na 230V AC nebo 24V AC/DC. Mechanismus je opatřen ochranným krytem IP 44.

Aktivační mechanismus se servopohonem

- B230T** nebo **G230T;** Aktivační mechanismus se servopohonem Belimo (B230T) nebo Gruner (G 230T) se zpětnou pružinou, dále vybavený termoelektrickým spouštěcím čidlem s aktivací při 72°C. Součástí servopohonu jsou dva koncové spínače pro signalizaci polohy listu klapky. Napájení 230V AC.
- B24T** nebo **G24T;** Aktivační mechanismus se servopohonem Belimo (B24T) nebo Gruner (G24T) se zpětnou pružinou, dále vybavený termoelektrickým spouštěcím čidlem s aktivací při 72°C. Součástí servopohonu jsou dva koncové spínače pro signalizaci polohy listu klapky. Napájení 24V AC/DC.
- BST0** nebo **GST0;** Aktivační mechanismus se servopohonem Belimo (BST0, 24V AC/DC, napájení přes komunikační jednotku 230V AC) nebo servopohonem Gruner (GST0, 24V AC/DC, napájení přes komunikační jednotku 24V AC) se zpětnou pružinou, dále vybavený termoelektrickým spouštěcím čidlem s aktivací při 72°C. Součástí servopohonu jsou dva koncové spínače pro signalizaci polohy listu klapky. Napájecí a komunikační jednotky Belimo BKN 230-24 nebo Gruner fs-UFC230-2.
- B24T-W** nebo **G24T-W;** Aktivační mechanismus se servopohonem Belimo (B24T-W) nebo Gruner (G24T-W) se zpětnou pružinou, dále vybavený termoelektrickým spouštěcím čidlem s aktivací při 72°C a kabely pro napájecí a komunikační jednotku (komunikační jednotka není součástí mechanismu). Součástí servopohonu jsou dva koncové spínače pro signalizaci polohy listu klapky. Napájení 24V AC/DC.
- B24T-SR** nebo **G24T-SR;** Aktivační mechanismus se servopohonem Belimo (B24T-SR) nebo Gruner (G24T-SR) se zpětnou pružinou a ovládáním 0-10V (možnost nastavení polohy listu v libovolné poloze), dále vybavený termoelektrickým spouštěcím čidlem s aktivací při 72°C. Součástí servopohonu jsou i koncové spínače se signalizací polohy listu klapky. Napájení 24V AC/DC. Tento aktivační mechanismus lze použít pouze pro klapky výšky $H \geq 160$ mm. Toto vyhotovení není možné použít pro klapky FDS-EI90S/EI120S.
