

SYSAQUA

Air Cooled Water Chillers

SYSAQUA.L (Cooling Only) / SYSAQUA.H (Heat Pump)

Models 20 to 125

Scroll Compressor

Refrigerant R410A

19.5 to 119.1kW

19.3 to 129.8kW

Key Points

- **R410A** refrigerant,
- Units are optimized for partial load operation,
- High ESEER and SEER,
- 2 compressors fitted in tandem for all the range with two capacity steps on sizes 20 to 45 and three capacity steps on sizes 55 to 125, with an immediate return on investment versus the inverter units,
- **Low noise version supplied as standard**, extra low noise version for the S units,
- "Night Mode" for energy savings and even more reduced noise level in night operation,
- Water law is standard for energy savings,
- Refrigerant circuit is completely closed in a separate compartment in order to reduce noise level (sizes 20 to 40),
- Great accessibility to internal components for service operations,
- New display on external panel allowing the complete control of the unit,
- Wide operating limits,
- High temperature operation up to 50 °C,
- Operation in heat pump mode down to external temperature of -17 °C,
- Fan speed control for low ambient operation in cooling mode down to -10 °C,
- ModBus interface available (reading/writing),
- Phase sequence monitor supplied as standard,
- User-friendly controller that allows to reduce the need of an external water tank in most of comfort air conditioning installations,
- Control logic on return or leaving water temperature,
- In cooling mode, 3.5 litres of buffer volume per kW are recommended,
- New technology "smart deice" standard for **SYSAQUA.H** units to ensure a constant temperature out of water even at very low temperatures
- Double water set point,
- Water filter (not fitted) and water flow switch (factory fitted) are supplied as standard,
- "Plug and play" hydraulic kit is standard on sizes 20 to 40 and optional on sizes 45 to 125,
- Automatic air vent,
- Victaulic connection on internal components ensuring a perfect sealing and facilitating service operations,
- Double 3/8" valve on water pipes for pressure measurement,
- Small footprint, allowing shipping and handling costs to be saved, units find easily a place to be installed.

SYSAQUA.L/SYSAQUA.H
65 to 125

Specifications

General

The new **SYSAQUA.L/SYSAQUA.H 20 to 125** have been designed and optimized to operate with R410A refrigerant fluid. They are of single refrigerant circuit type.

They are available in **cooling only (SYSAQUA.L)** and **heat pump (SYSAQUA.H)** versions.

Each versions consists of **12 sizes (20, 25, 30, 35, 40, 45, 55, 65, 75, 90, 105 & 125)** and covers a nominal cooling capacity range from **19.3 to 129.8 kW** and a nominal heating capacity range from **19.5 to 119.1 kW**.

All units are equipped with **two scroll compressors fitted in tandem** for adapting to partial system loads.

The general operation status of the machine is continuously under the control of an **IHM controller**.

The **SYSAQUA.L** and **SYSAQUA.H units can operate without water tank**, thanks to the IHM controller that implements an **auto-adaptative control logic** ensuring a total protection of the compressors at different load or water volume conditions.

The minimum water volume requested in cooling mode is **3.5L/kW** for application air conditioning and **10L/kW** for application process.

In heating mode, **12.5L/kW** are recommended in order to guarantee homogeneous temperatures during the defrosting cycles (comfort and energy savings).

A **fan speed controller** can be also supplied as factory-fitted option to authorize the unit to operate in cooling mode at low ambient temperature.

SYSAQUA.L and **SYSAQUA.H** units can be supplied in several versions:

- **STD (Standard) version** : Includes a low noise acoustical performance.
- **S (Extra low noise) version** : Obtained by the installation of acoustic box around compressors.
- **HPF version** : Increases the static pressure.

Cabinet and structure

The cabinet and structure of the unit are of heavy duty galvanized steel. All galvanized steel components are **individually painted** by a special painting process before the assembly of the unit.

This painting system performs a homogeneous protection to the corrosion. The painting is a polyester powder based type, coloured in **RAL 7040**.

The units **SYSAQUA.L/SYSAQUA.H** are suitable for outdoor installation, directly on the building roof or at the ground level.

Compressors

Each unit is equipped with two scroll compressors fitted on a rail and assembled together to form **tandem compressors**.

The compressors are then mounted on rubber pads in order to eliminate noise and vibration transmissions.

The compressor motors have a direct start-up. Each motor is cooled by the refrigerant gas and is equipped with an overload protection.

A **phase sequence monitor** is supplied as standard.

Evaporator

The evaporator is consisting of a stainless steel plate heat exchanger insulated with closed cell synthetic foam. It is protected by an **antifreeze electric heater** to ensure a good protection against freezing at low ambient temperature (-10 °C min.) when the unit is switched off.

Maximum working pressure is 10 bar at water side and 45 at refrigerant side.

Condenser

The condenser is a finned coil constructed with seamless copper tubes mechanically expanded into aluminium fins. The fins of **SYSAQUA.H** coils are made of aluminium with hydrophylic blue coating to facilitate water droplets drain.

The condenser is largely dimensioned in order to optimize performance and defrosting cycles.

The condenser can be equipped, as optional, a protective grille to prevent shocks.

Condenser fans and motors

Each unit has one or two axial fan, with 2 speeds. According to the version, the fan is cabled in order to have high speed (700 to 900 rpm) for Standard version and low speed (530 to 680 rpm) to reduce the sound level for S version.

The fan motor has IP54 grade and is equipped with a thermal overload protection.

A pressostatic type fan speed controller can be delivered as factory-fitted option. It allows the unit to operate in cooling mode at low ambient temperatures down to -10 °C minimum, because it regulates the fan speed in order to maintain the constant condensing temperature.

All fans are fitted with a protective grille on top.

Refrigerant circuit

All units have one refrigerant circuit consisting of : scroll tandem compressors, plate heat exchanger, thermostatic expansion valve, 4-way reverse cycle valve and liquid reservoir (heat pump version only), condenser coil, as well as safety and control devices such as high pressure switch, high/low pressure transducers and PED safety valve.

Inspection on refrigerant via a sight glass can be done during service operations, by removing an access panel, without disturbing the unit operating conditions.

A set of LP and HP gauges can be factory fitted as optional.

All refrigerant components are shown in the functional diagrams illustrated in the next pages, section "Refrigerant flow diagrams".

Hydraulic circuit

Thanks to the design flexibility on the hydraulic circuit, all the units can be configured in several ways :

- **BASIC unit** : Unit without pump, the hydraulic circuit contains the following components : supplied loose water filter, mounted water flow switch, water safety valve, automatic air vent, optional field-installed in/out 3/8" water valves. All water piping is covered with thermal insulation.
- **1P-SP** : One pump unit having the same equipment as BASIC unit + a pump with 150 kPa external static pressure. An air vent is provided for this configuration.
- **2P-SP** : Two pump unit (from size 45) having the same equipment as BASIC unit + 2 pumps with 150 kPa external static pressure. Each pump can be isolated and replaced with the aid of two valves. An air vent is also provided for this configuration.
- **"Variable Primary Flow"** is used to modulate the power of the hydraulic pump

The different components of hydraulic kit are interconnected by Victaulic couplings in order to facilitate maintenance operations.

The hydraulic connections are of male gas threaded type; for the connection diameters, please refer to the physical data tables on the next pages.

Specifications

Control panel

The units are fitted with an external control panel that displays the operating parameters and alarms.

The control panel is accessible from exterior without removing any parts, nor shutting down the unit, because it is placed on an external panel.

The **SYSAQUA.L/SYSAQUA.H** chillers are equipped with a microprocessor based control with a new **IHM** logic that implements an intelligent control **with anticipation of needs**, either on entering water temperature, or on leaving water temperature.

The main features of this control system are :

- User-friendly : with only 6 buttons and a tree logic, it is possible to control the unit easily,
- Reliable : all indications on the display are visible in every weather conditions,
- Internal test procedure,
- Alarm visualization with a logging of the last 10 alarms,
- Remote ON/OFF switching,
- Compressor and pump working hour counter,
- Pressure transducers to control discharge and suction temperatures,
- Maximum discharge temperature control,
- Part load operating mode,
- Remote Cooling/Heating mode switching,
- Compatibility with BMS (RS485 ModBus RTU or BacNet MSTP protocol),
- Compressor operating limits stored in a flash memory.

Control and safety devices

Each unit is complete with the following safety and control devices :

Safety :

- ➔ Fan motor overload protection.
- ➔ Compressor motor overload protection.
- ➔ Water flow switch.

- ➔ Water filter (supplied loose).
- ➔ High pressure switch.
- ➔ High and low pressure transducers.
- ➔ Evaporator antifreeze electric heater.
- ➔ Crankcase heater.
- ➔ Safety valve on 45 bar refrigerated side.
- ➔ Safety valve on 3 bar water side.

Control :

- ➔ Entering water temperature sensor.
- ➔ Leaving water temperature sensor.
- ➔ Coil temperature sensor.
- ➔ Discharge temperature sensor.
- ➔ Air temperature sensor.
- ➔ Suction and discharge pressure transducers.
- ➔ Dry contact available to the client:
ON / OFF, SUMMER / WINTER, Day / Night.

Conformity with standards

All **SYSAQUA.L/SYSAQUA.H** units are in compliance with the following standards:

- ✓ Machine Directive : 2006/42/EC
- ✓ Low Voltage Directive : 2014/35/UE
- ✓ Electromagnetic Compatibility Directive : 2014/30/UE
- ✓ Pressure Equipment Directive : 2014/68/UE
- ✓ RoHs directive : 2011/65/EU

Factory-installed options

- ➔ Condenser protective grille.
- ➔ Reinforced acoustic insulation (XLN version).
- ➔ Coil with epoxy treatment.
- ➔ LP/HP gauges.
- ➔ Power supply without neutral kit.
- ➔ Lack of water pressure switch.
- ➔ 1-pump hydraulic kit (sizes 45 to 125).
- ➔ 2-pump hydraulic kit (sizes 45 to 125)
- ➔ Variable Primary Flow
 - ✓ double speed
 - ✓ capacity
 - ✓ constant outlet pressure
- ➔ Fan speed control kit (for operation with low ambient temperature down to -10 °C).
- ➔ Nordic Pack including a protection of the external coils and a heating wire in condensate tray.
- ➔ Electric heating

Field-installed accessories

- ➔ Anti-vibration rubber pads or spring damper.
- ➔ In/Out valve kit.
