

SysCoil 2

Fan Coil Units

Models VC, VN, HC, HN

0.79 to 12.70 kW

0.48 to 10.00 kW

84 to 1548 m³/h

Quality, efficiency and reliability

Support feet supplied as optional

Vertical console units with cabinet, VC type

VC vertical console units are designed for use in three different types of installation:

- as a wall hung console in areas where a skirting board prevents the use of a floor mounted console ;
- as a floor console with optional front air intake FA (most frequently located below a large window) ;
- as a floor console with support feet and bottom air intake.

They feature a modern decorative style cabinet with matching plastic discharge grille, providing a high performance unit that is attractive and durable which will complement any room decor.

The VC models can be fitted, as optional, with electromechanical or electronic Aqu@Net control, with valve kits, etc.

Vertical concealed units without cabinet, VN type

VN vertical chassis only units are designed for applications that require a fully concealed or a fully recessed installation.

These units include all the features of the VC vertical console unit type except that only the chassis is supplied instead of decorative style cabinet.

Like the VC units, Aqu@Net control (except the remote control) as well as other electromechanical controls and valve kits can be fitted, as optional, on unit.

Units can be fitted with optional feet (supplied loose), if floor mounting is required.

Bottom air intake grille supplied as optional

Ceiling exposed units with cabinet, HC type

HC ceiling exposed units are designed for ceiling mounting in areas where it is necessary to conserve floor space.

They contain all the features of the VC unit within the decorative style cabinet with matching plastic discharge grille.

Standard version is designed for rear horizontal air intake without inlet grille.

Similar to the previous models, the Aqu@Net control can be supplied, as optional, on HC units with remote control. Other optional controls and valve kits are also available.

Ceiling concealed units without cabinet, HN type

HN ceiling chassis units are designed for concealed or recessed ceiling installations. This unit consists of the HC basic unit horizontally installed.

HN units contain all the features of the HC ceiling exposed units except that only the chassis casing is supplied instead of the decorative style cabinet.

Possibility of supplying separately an optional Aqu@Net type remote control for wall mounting. Other optional controls and valve kits are also available.

New range of fan coil units SysCoil 2: "Innovation for an optimum comfort"

Design features

Easy to install, improvement in sound levels and performances, Aqu@Net electronic control, etc., are the key developments carried on our fan coil units.

The **SysCoil 2** II fan coil unit range is issued from that development striving to meet customers' wishes and advices.

Aesthetic of the grille, associated with the casing refined finish allows a harmonious and smart integration of the fan coil units **SysCoil 2** in all types of interiors.

They are the ideal solution to air condition agreeably and efficiently, flats, hotels, hospitals, offices and other premises, all year long.

The **SysCoil 2** fan coil units range includes **8 sizes** with air flows ranging from **84 to 1548 m³/h**, for cooling capacities of **480 to 10000 W** and for heating capacities of **790 to 12700 W**.

Cabinet

All units are manufactured from heavy-gauge zinc coated sheet steel for long life and durability. Oven baked powder epoxy paint insures a good protection and an attractive finish for all outside panels (Standard colour : **RAL 9003**).

The standard discharge grille is made of "ABS" plastic and has a different colour from the cabinet (standard colour : **Pantone 427C**).

On the versions with optional front intake, monobloc grille, painted in RAL 9003, is mounted flush to the cabinet. Grille can be removed by releasing the two quarter turn fixing screws to get access to the filter.

Casing

Made of galvanized steel insulated with closed cell polyethylene foam. Casing has 3 slotted lugs on its rear side which allow the unit to be easily and quickly installed at site, in wall or ceiling mounting.

Access to all internal components of the unit is facilitated by an easy dismounting of the casing.

Condensate drain pan is made from galvanized sheet steel coated with closed cell polyethylene foam on external face. **The drain pan is painted** to ensure the anticorrosion protection.

All models are equipped with an inclined condensate drain pan to ensure optimal condensate draining and to minimize water retention.

SysCoil 2 sizes 10 to 70 is equipped with a condensate drain pan monoblock including the auxiliary pan. The **SysCoil 2** size 80 comes in standard with an auxiliary pan in painted galvanized sheet metal coated with closed cell polyethylene foam on external face.

The **SysCoil 2** fan coil units are equipped with optimized coils to bring the best possible performances in **2-pipes, 4-pipes, or 2-pipes/2-wires versions**.

SysCoil 2 range is provided with an **electronic control** : **Aqu@Net**, whose ergonomic and discrete remote command can be loose or fitted on the fan coil unit.

All settings being made at factory, no needs to be done by installer.

This control, especially innovating, **offers as standard a master/slave function up to 15 units** from one single remote control.

Other features like window contact, occupied/unoccupied, antifreeze modes are integrated without involving any price add.

Coils

Made of staggered copper tubes, mechanically expanded into aluminium fins, assuring maximum heat transfer efficiency.

The units are equipped, in their standard 2-pipes configuration, with a main chilled water coil with 2 rows (**SC10**), 3 rows (**SC20** to **SC80**).

In the 4-pipes configuration, the unit is equipped, in the same block with 3 rows (**SC10**), 4 rows (**SC20** to **SC80**), with chilled water coil and heated water coil 1 row (on an independent circuit).

Each coil is supplied with headers having air vent at the highest point and drain plug at the lowest point.

Note : The water connection side is defined left-hand or right-hand when observer is looking at the unit from the discharge side.

New range of fan coil units SysCoil 2: "Innovation for an optimum comfort"

Fan and motor assembly

The units are fitted with a fan-motor assembly of which the fan is composed of double inlet forward curved centrifugal wheel(s) dynamically balanced and specially designed for an optimal air flow and a low noise level..

The **SysCoil 2** range can be supplied with 2 types of motor :

- The **standard AC motor of asynchrone direct drive type** having 5 speeds, 3 of them are factory pre-wired, equipped with a built-in normally closed thermal protection of automatic reset type.
- The **EC motor** of high efficiency and low electrical consumption type for a significant energy saving. The motor is suitable for 0-10 V input, ensuring variable speed capability. It is fitted with ECospeed3 interface card (supplied as standard) for a 3-speed optimized running.

Power supply :

230 V±10%/1 Ph/50 Hz - 60 Hz.

Filter

Filter media is mounted on a metallic frame.

Efficiency: G2 / G3

Electrical connections

Units are supplied complete with internal electrical wiring terminating in a junction block protected by a cap or the cabinet.

Cabinet internal space allows installation of optional control systems supplied by manufacturer or others.

When the optional Aqu@Net control is fitted on the unit, the Aqu@Net FCC controller includes a junction block for power supply connection and incorporates, as standard, a cable clamp.

Options

Many different options and accessories are available for all units : see chapter "Mounting accessories".

Controls

SysCoil 2 units can be factory fitted with the following optional controls :

- ✓ FCC controller of electronic communicating Aqu@Net control with RCL remote control

RCL remote control

Aqu@Net FCC controller can be provided with NIU interface card to be used with µBMS or eNIU interface card for connection to a BMS via ModBus protocol.

µBMS and NIU interface card

- ✓ Electromechanical or electronic control for wall mounting.

TRM-FA

TAE20

- ✓ Electromechanical control : CMV, TBMV.

Main Controls (Optional)

**CMV (supplied fitted)
Manual fan speed selector**

**TBMV (supplied fitted)
Electromechanical control with valve(s)**

- 4 position manual fan speed selector : OFF/LS/MS/HS.

- Action on valves and fan, 4-pipes, 2-pipes/2-wires or manual changeover 2-pipes system.
- Set of thermostat + summer/winter switch + 4-position manual speed selector: OFF/LS/MS/HS.
- For 4-pipes or manual changeover 2-pipes system, possibility of mounting a low temperature cut-out sensor SD (temp. range 45 °C/35 °C) on hot water piping to stop fan operation

**TRM-FA (supplied loose)
Electromechanical remote control**

**TAE20 (supplied loose)
Electronic remote thermostat**

- Wall mounted remote thermostat to control valves and fan.
- Suitable for 4-pipes (with cooling and heating valves), 2-pipes/2-wires (with cooling valve and electric heater), 2-pipes (with cooling or heating valve) and reversible 2-pipes (with manual changeover) systems.
- Control buttons : ON/OFF; Summer/Winter changeover; Manual fan speed selector : LS/MS/HS.

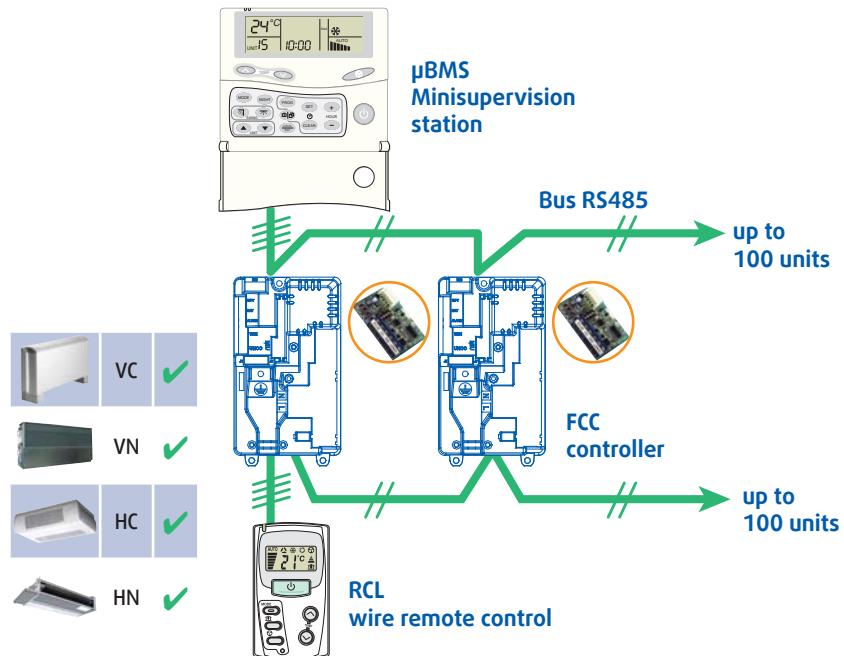

- Adjustable dead zone electronic thermostat with summer/winter automatic changeover.
- Suitable for 4-pipes (with cooling and heating valves), 2-pipes/2-wires (with cooling valve and electric heater (TAE 20BE)), 2-pipes (with cooling or heating valve) or reversible 2-pipes (with or without extra electric heating, 4-way valve mandatory and SEH changeover sensor) system.
- Controls buttons : ON/OFF, manual fan speed selector : LS/MS/HS, NO (normally open) or NC (normally closed) window contact CF.

Main Controls (Optional)

Aqu@Net communicating electronic control
FCC electronic controller (supplied fitted)

Aqu@Net communicating electronic control
System networking

- FCC controller can be configured in 2-pipes heating only or cooling only, 2-pipes/2-wires, reversible 2-pipes with or without extra electric heating or 4-pipe system.
- Other pre-programmed functionalities included : master/slaves up to 15 units controlled from one remote control only; NC window contact; automatic or manual selection of unoccupied mode; antifreeze mode.

RCL wire remote control with digital display (supplied loose or fitted)

- RS485 communication bus system allowing user to monitor 100 fan coil units through a supervision station (µBMS), with FCC Aqu@Net controllers fitted with interface boards (NIU) and with local controls (RCL). Max. length of bus = 1000 meters, shielded twisted pair cable.

µBMS programmable supervision station (supplied loose)

- Wire remote control for wall mounting or for mounting on AWC units.
- Keyboard with locking device and buttons : ON/Standy; fan operation (auto or manual); operation mode (cooling, heating, auto or fan operation only); temperature setpoint adjustment in different modes.
- Functioning LED.

- In association with FCC controllers through a communication bus and interface board (NIU), µBMS allows 15 different zones with 100 units to be managed.
- Other functionalities included either in global or individual control by zone :
 - Daily and weekly programming of running times (2 hour ranges),
 - Programming and setting of temperature setpoints (cooling, heating, auto),
 - Choice of operation mode (cooling, heating, auto or fan operation only),
 - Choice of fan operation speed (auto or manual).

Performances based on :

- Summer : air 27 °C/19 °C (wet bulb) and chilled water 7/12 °C.
- Winter : air 20 °C, entering water température 50 °C, water flow identical to cooling mode..

Pt : Total cooling capacity.

Ps : Sensible cooling capacity.

Pc : Heating capacity.

WPD : Water pressure drop

Standard wiring of the 3 speeds. Other speed combinations available upon request.

Performance Data - 2-pipes System
